E-Tax Declaration Solution

sorgera

Community behind the company

20+ years of experience in the market
50+ contractors under the umbrella

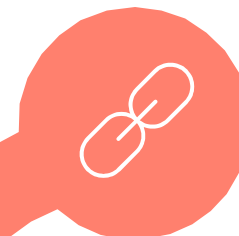

200+ Multinational Experience

Global standard on quality and security
Sustainable long term solutions
SLA with high quality service

Complex Architecture Experience

Pre-developed tools for SAP integrations
Local Document Compliance
Requirements
Cloud based development tools

Product Approach

Ready to use and easy to implement
products for common SAP

» Tax Declaration

➤ E-Tax Declaration

- E-tax declarations are submitted electronically via the internet instead of on paper. Files are prepared using the Revenue Administration's BDP tool or directly from ERP systems, and approved online through the same platform.

➤ Sorgera E-Tax Declaration Solution

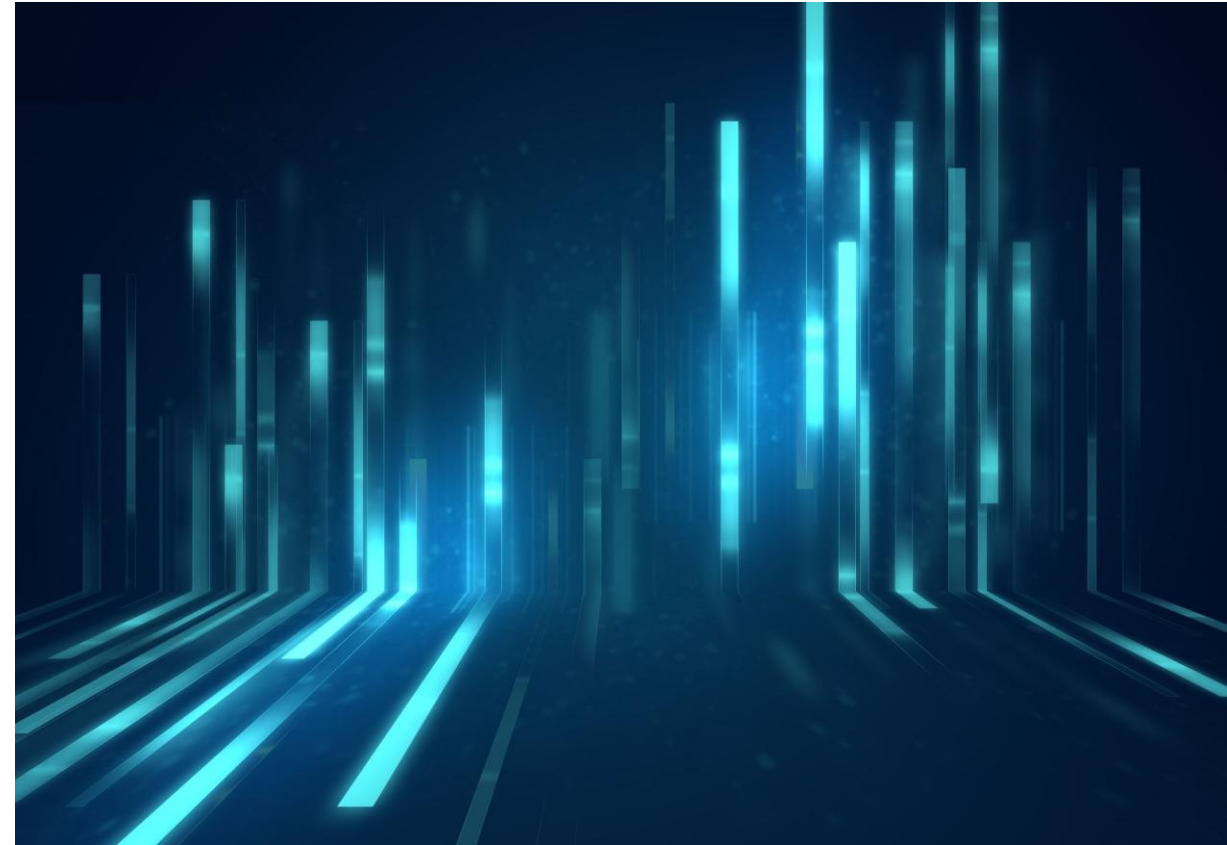

- Sorgera's e-Declaration solution allows tax declarations to be prepared directly in SAP and exported in GIB-compliant formats for easy upload to the official e-Declaration portal

» Declaration Types – Stamp Tax Declaration

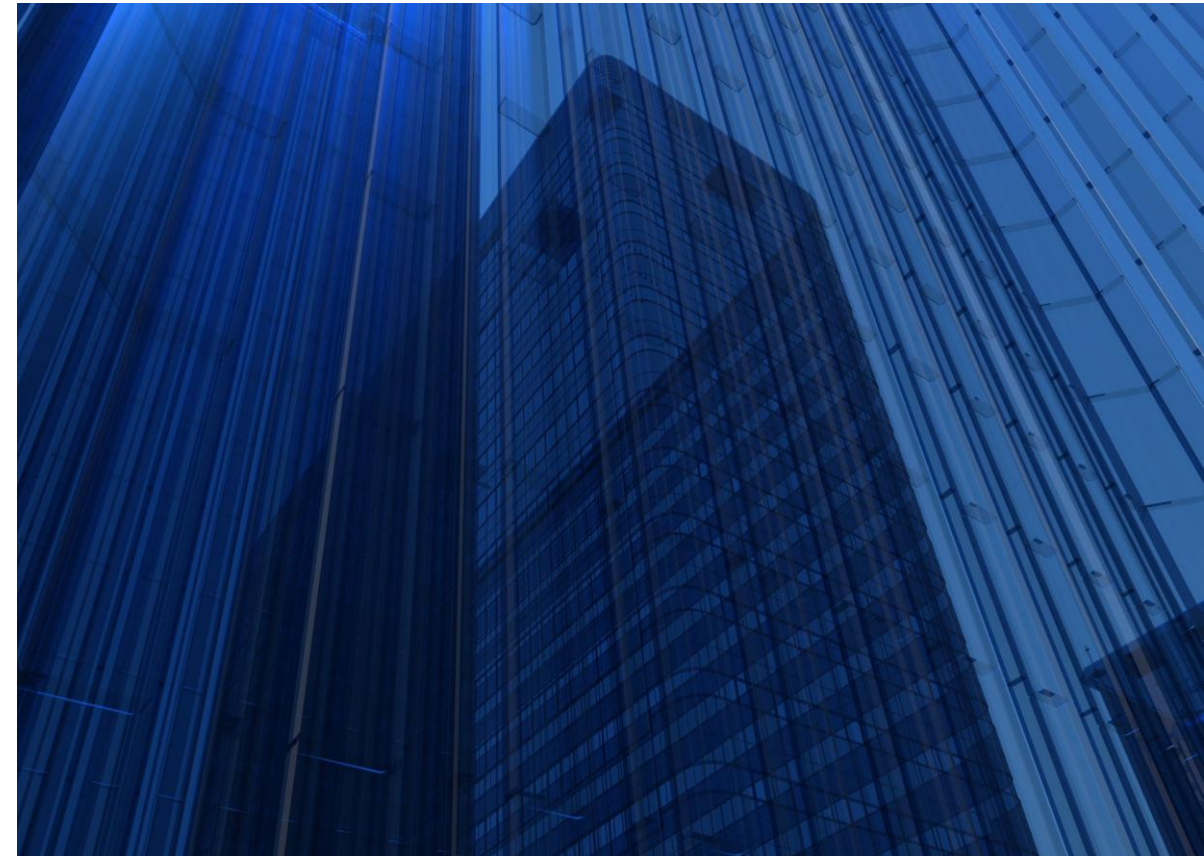

- Stamp tax applies to official documents that confirm legal or formal transactions.
- Sorgera's e-Declaration solution automatically detects stamp tax data in SAP and allows external documents to be imported via Excel or tables for complete declaration preparation.

» Declaration Types – VAT Type 1 Declaration (KDV1)

- KDV1 is submitted monthly by VAT-paying companies.
- Sorgera's e-Declaration solution reads SAP tax tables, runs calculations and validations, and records the data directly into the SAP e-Declaration system.

» Declaration Types – VAT Type 2 Declaration (KDV2)

- KDV2 is submitted for reverse charge VAT transactions in the same month they occur.
- Sorgera's e-Declaration solution automatically reads SAP tax tables, performs required checks, and records the data directly into the SAP e-Declaration system.

» Declaration Types – Withholding Tax Declaration (Form 1003A)

- This declaration reports income subject to withholding, such as wages, rent, and professional services.
- Sorgera's e-Declaration solution pulls data from payroll and AP modules in SAP, performs necessary validations, and generates a compliant file ready for upload to the GIB portal.

» Declaration Types – GEKAP Declaration (Environmental Contribution Fee)

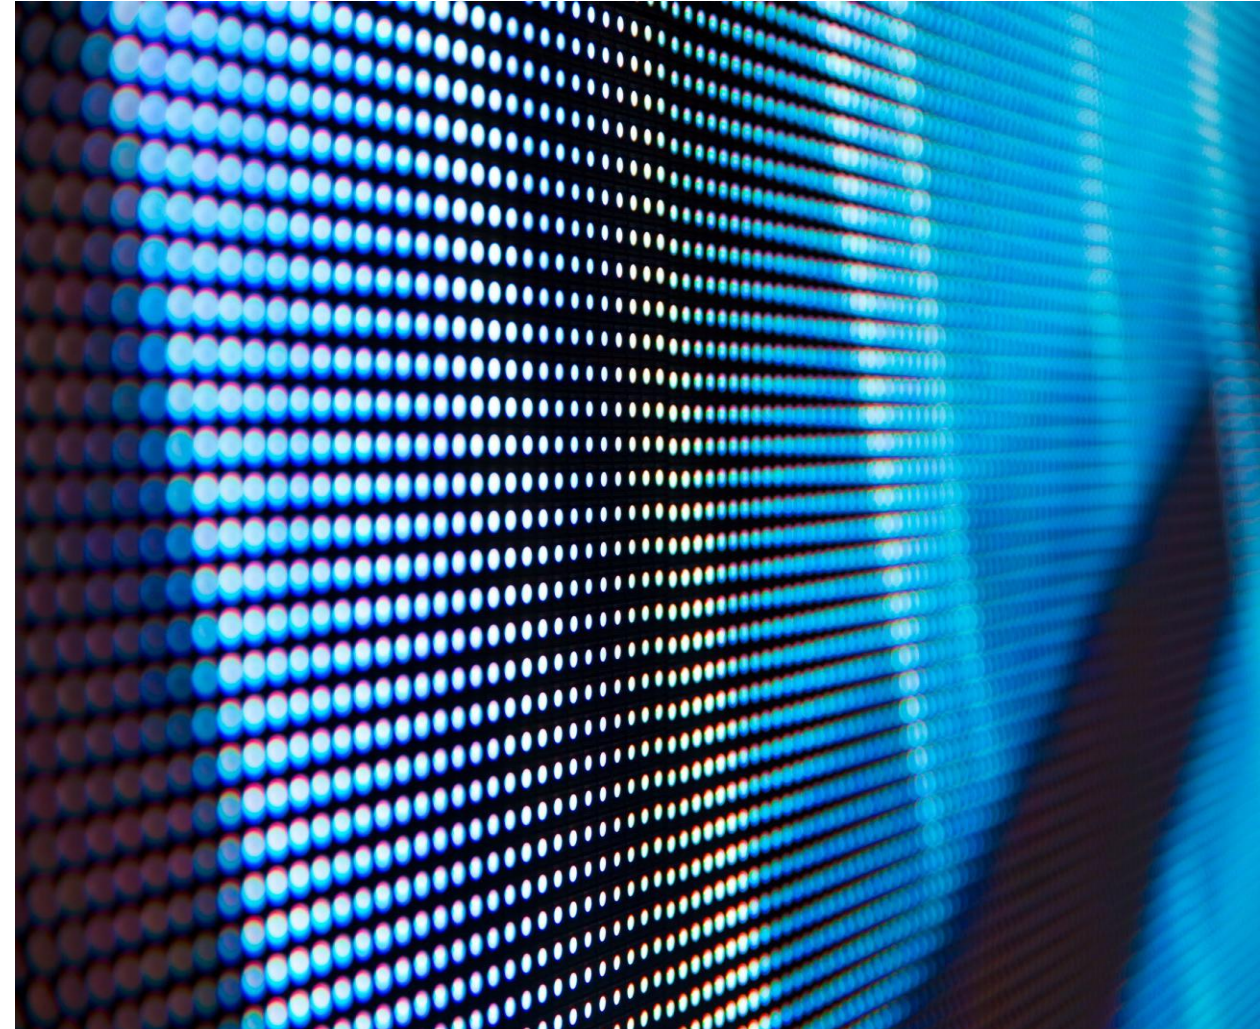

- The GEKAP (Environmental Contribution Fee) applies to certain environmentally impactful materials such as plastic bags, packaging waste, and chemical products.
- Sorgera's e-Tax Declaration solution identifies GEKAP-related items in SAP using predefined material categories and transaction data.
- It automatically aggregates quantities, fills the required declaration tables, and generates the file in the correct format for submission to the GIB portal.

» Declaration Types – Provisional Tax Declaration

- Provisional tax is paid quarterly on corporate income in advance of the year-end.
- Sorgera's e-Declaration solution gathers financial data from SAP, including income statements and invoices, calculates non-deductible expenses and withholding taxes, and generates a GIB-compliant provisional tax file within SAP.

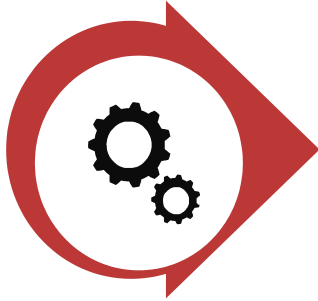

» Declaration Types – Corporate Tax Declaration

- Corporate tax is calculated annually based on a company's profit.
- Sorgera's e-Declaration solution collects income, expenses, and invoice data from SAP, accounts for non-deductible items and provisional tax payments, and generates the final corporate tax file in GIB-compliant format.

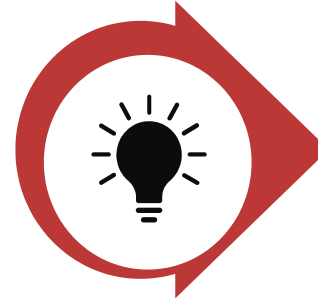

»» Solution Features

**Automatic data
transfer from SAP
system**

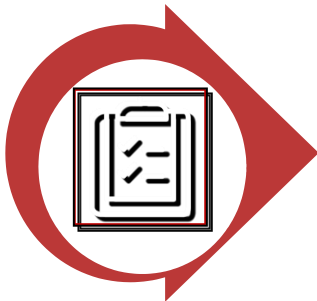

**Capabilities for
Uploading Files via
Excel**

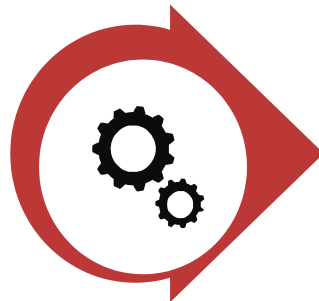

**Manual data entry
without altering
existing data
structures**

**Calculation and
reporting capabilities
on data tables**

Features**

» Advantages

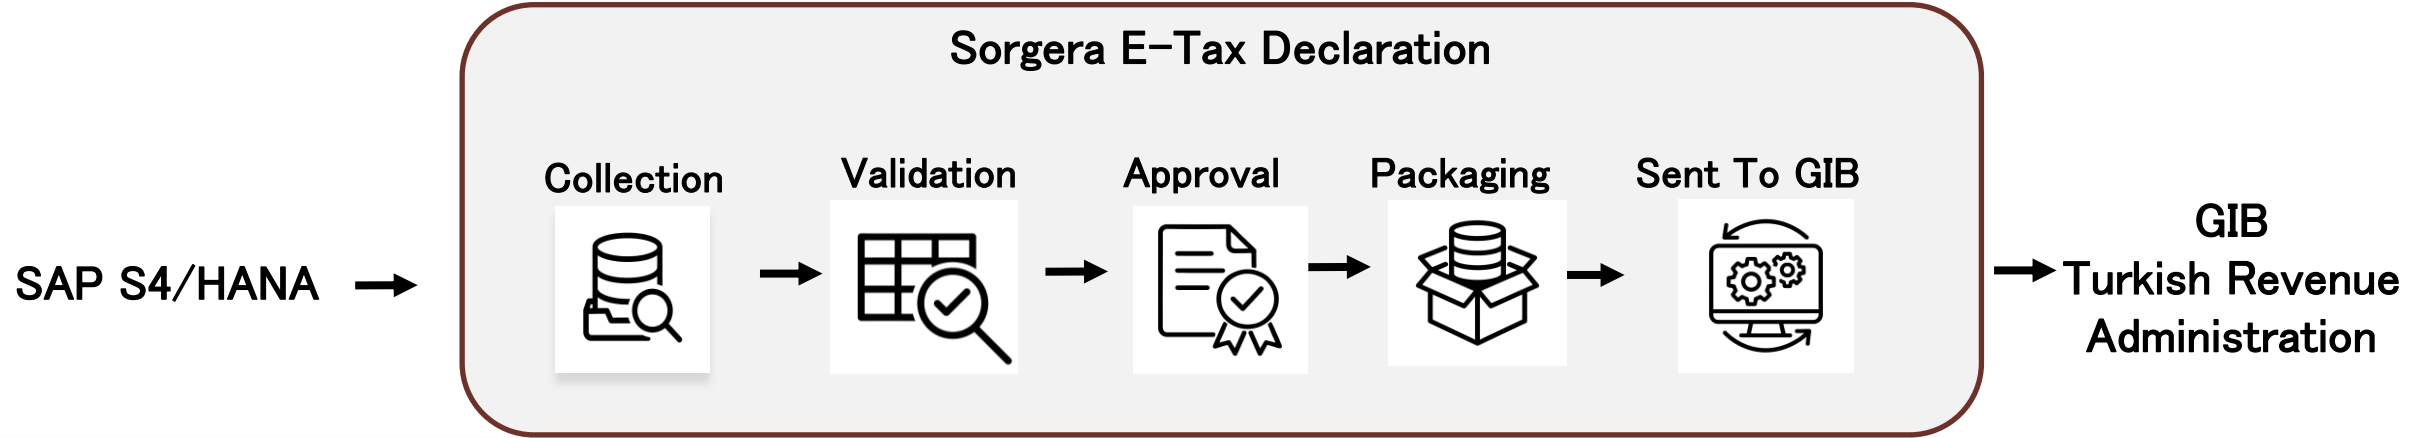

All declarations are prepared, approved, and transferred to the GIB system from a single environment

User-friendly interface ensures ease of use and process efficiency

E-Tax Declaration Process Flow

E-Tax Declaration Types

- Stamp Tax
- KDV1
- KDV2
- Withholding Tax (Form 1003A)
- GEKAP
- Provisional Corporate Tax
- Corporate Tax

E-Tax Process

- Tax-related data within the SAP system is collected.
- Information that needs to be imported from external sources is added to the e-Declaration solution via Excel data upload.
- Relevant rates and parameters are entered into the system.
- Tax calculations are executed for the selected declarations in accordance with predefined rules.
- The calculated data is analyzed and necessary adjustments are made.
- Tax data is approved and converted into XML/PDF formats.

Thank you!
